As the knowledge in the world of high-tech products progresses, Iran's pharmaceutical industries are actively working on conventional medicines, biotech, and vaccines in more than 170 pharmaceutical factories, which are all operating within Iran.

Besides the active pharmaceutical factories, a large number of pharmaceutical factories are establishing rapidly in industrial estates which significantly increases the share of private-sector factories in shaping the pharmaceutical industry.

Despite imposed sanctions on Iran during the past four decades, having benefited the able and skillful hands and brains of its scientists, pharmaceutical industry has succeeded to manage and stabilize the pharmaceutical market and meet the needs of patients.

Although we proved that the imposed sanctions did not impact the pharmaceutical industry, lack of effective communication between world banking system and Iranian counterparts made everything difficult to supply the medicine.

In addition to the problems of medicine supply management in emergency situation of the country, the corona pandemic increased the responsibility of the pharmaceutical industry. Iranian pharmaceutical companies succeed to pass this hard test tactfully and by relying upon the ability of its local experts, they have been able to provide effective medicines for this infectious disease immediately after the last methods of treatment in global protocols.

We are proud to say the Iranian pharmaceutical team by all industry actors such as pharmacists, chemists, engineers, etc. runs a pioneer industry.

Iran Pharma's target is to expand export markets for Iranian products and raise the trade balance with other countries within the next 5 years.

This goal will be feasible in cooperation with the Food and Drug Administration of Iran and other organizations.

Company Profile:

Caspian Tamin Pharmaceutical Company (Caspian Tamin), formerly known as Iran Pharmaceutical Development and Investment Co. (IPDIC), was established in 1983 as a private joint stock company.

Caspian Tamin plant, headquartered in Tehran, is located in Guilan, northern Iranian province as an affiliate of the Tamin Pharmaceutical Investment Co. (TPICO)- Iran's leading pharmaceutical holding company.

It was initially founded to invest in various pharmaceutical and foodstuff businesses. Upon the decision of the mother company to establish a pharmaceutical manufacturing plant, the project started with setting up a factory on a 150,000 square meter plot with a 40,000 square meter total building area and became fully operational with the most sophisticated and modern machinery and laboratory equipment, having helped the whole process to meet GMP requirements and WHO regulations.

Production Lines:

Caspian Tamin has been providing a large proportion of small volume parenteral dosage form needs for health care system in Iran. Apart from ampoule, which is its main focused dosage form, semisolids (cream, ointment, gel, suppository), oral liquids and syrups are fully operational. Also, Pre-filled syringes are produced as a contractual product. We have already presented 144 pharmaceutical products to national and international market, 11 of which have being exclusively manufactured by this company in Iran.

Caspian Tamin owes its incredible progress to the most high-tech industry engaged in the plant and also overqualified staff who have dedicated themselves to humanity's quest through supplying the customers with the most high-quality medicines at the most possible competitive prices.
